View geographic data, query the map for more information, measure ground features you see in the imagery and report on your research using this feature-packed online mapping application. Compare imagery year over year and research land information from anywhere with just an internet connection.

Search for data on our online data store, select files covering your location, download your order, and work with aerial imagery and geographic data saved locally. Use the interactive map to locate your area of interest and purchase geo-data easily and quickly with a credit card.

Connect to a high resolution aerial imagery mosaic base layer and elevation contours served directly to your CAD or GIS workstation, just as you would connect to data stored locally. Bandwidth based pricing allows your team to use MapCast as little or as much as you need.

First Base Solutions (FBS) delivers high quality geospatial data and custom mapping solutions to organizations across North America. Visualizing complex information using orthophoto and spatial data enables organizations to save time and money by efficiently managing projects, offering superior service, and outdoing the competition with improved day-to-day decision making. FBS caters to organizations with diverse mapping needs, technical experience, and budgets.

ABOUT FIRST BASE SOLUTIONS

What We Do

We provide aerial image acquisition, topographic modeling, related mapping services, and custom web mapping application development.

Who We Serve

We empower our customers across Ontario in engineering, development, construction, government, energy, real estate, law, and many other industries through knowledge and service.

Our Strategy

Making access to geographic data fast, easy, and affordable by partnering with key data and solution providers to deliver comprehensive mapping services.

PRODUCTIVITY

Save time and money on researching land information.

SMART DECISIONS

Make well informed strategic decisions based on reliable data.

VISUALIZATION

Gain business insights by layering your own data over a photo map base.

COMMUNICATION

Tools to communicate complex spatial information easily.
